

Researchers have found Hydrocodone; Oxycodone & Vicodin are the most popular abused prescription painkillers. Addiction causes health complications and can create life-threatening situations. It also contributes to a lost quality of life with family members and threatens livelihood. Often the problem goes unreported but having the awareness about the dangers of abuse can help save the life of loved ones.

The Neighborhood watch cares about the community and the people and hopes you will join us at the meeting to receive more information on these types of “Prescription Drugs.”

Neighborhood Watch Meeting

August 12, 2014
